

CampusConnect Professional Project Report

1. Executive Summary

Section 1

CampusConnect is a university platform that enables students to buy and sell used items, advertise services, discover internships and jobs, browse campus events, and communicate with one another. The project demonstrates cross-functional collaboration between Software Engineering and Digital Marketing.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

CampusConnect is a university platform that enables students to buy and sell used items, advertise services, discover internships and jobs, browse campus events, and communicate with one another. The project demonstrates cross-functional collaboration between Software Engineering and Digital Marketing.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

CampusConnect is a university platform that enables students to buy and sell used items, advertise services, discover internships and jobs, browse campus events, and communicate with one another. The project demonstrates cross-functional collaboration between Software Engineering and Digital Marketing.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

CampusConnect is a university platform that enables students to buy and sell used items, advertise services, discover internships and jobs, browse campus events, and communicate with one another. The project demonstrates cross-functional collaboration between Software Engineering and Digital Marketing.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

CampusConnect is a university platform that enables students to buy and sell used items, advertise services, discover internships and jobs, browse campus events, and communicate with one another. The project demonstrates cross-functional collaboration between Software Engineering and Digital Marketing.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

2. Project Objectives

Section 1

Deliver a functional prototype while demonstrating planning, teamwork, communication, leadership, problem solving, initiative, documentation, testing, and presentation.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Deliver a functional prototype while demonstrating planning, teamwork, communication, leadership, problem solving, initiative, documentation, testing, and presentation.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Deliver a functional prototype while demonstrating planning, teamwork, communication, leadership, problem solving, initiative, documentation, testing, and presentation.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Deliver a functional prototype while demonstrating planning, teamwork, communication, leadership, problem solving, initiative, documentation, testing, and presentation.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Deliver a functional prototype while demonstrating planning, teamwork, communication, leadership, problem solving, initiative, documentation, testing, and presentation.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

3. Stakeholders

Section 1

Client, University Students, Student Entrepreneurs, Recruiters, Event Organizers, System Administrators, Marketing Team, Development Team.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Client, University Students, Student Entrepreneurs, Recruiters, Event Organizers, System Administrators, Marketing Team, Development Team.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Client, University Students, Student Entrepreneurs, Recruiters, Event Organizers, System Administrators, Marketing Team, Development Team.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Client, University Students, Student Entrepreneurs, Recruiters, Event Organizers, System Administrators, Marketing Team, Development Team.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Client, University Students, Student Entrepreneurs, Recruiters, Event Organizers, System Administrators, Marketing Team, Development Team.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

4. Functional Requirements

Section 1

User registration/login, profile management, marketplace, search/filter, product details, messaging, internships, events, admin moderation, responsive design.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

User registration/login, profile management, marketplace, search/filter, product details, messaging, internships, events, admin moderation, responsive design.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

User registration/login, profile management, marketplace, search/filter, product details, messaging, internships, events, admin moderation, responsive design.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

User registration/login, profile management, marketplace, search/filter, product details, messaging, internships, events, admin moderation, responsive design.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

User registration/login, profile management, marketplace, search/filter, product details, messaging, internships, events, admin moderation, responsive design.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

5. Non-Functional Requirements

Section 1

Performance, scalability, usability, accessibility, security, maintainability, reliability, availability, responsiveness.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Performance, scalability, usability, accessibility, security, maintainability, reliability, availability, responsiveness.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Performance, scalability, usability, accessibility, security, maintainability, reliability, availability, responsiveness.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Performance, scalability, usability, accessibility, security, maintainability, reliability, availability, responsiveness.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Performance, scalability, usability, accessibility, security, maintainability, reliability, availability, responsiveness.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

6. Software Architecture

Section 1

Presentation Layer (React), API Layer (Node.js/Express), Data Layer (Firebase/PostgreSQL), Authentication, Hosting, CI/CD.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Presentation Layer (React), API Layer (Node.js/Express), Data Layer (Firebase/PostgreSQL), Authentication, Hosting, CI/CD.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Presentation Layer (React), API Layer (Node.js/Express), Data Layer (Firebase/PostgreSQL), Authentication, Hosting, CI/CD.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Presentation Layer (React), API Layer (Node.js/Express), Data Layer (Firebase/PostgreSQL), Authentication, Hosting, CI/CD.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Presentation Layer (React), API Layer (Node.js/Express), Data Layer (Firebase/PostgreSQL), Authentication, Hosting, CI/CD.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

7. UI/UX

Section 1

Design principles, wireframes, accessibility, typography, color system, navigation, responsive layouts.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Design principles, wireframes, accessibility, typography, color system, navigation, responsive layouts.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Design principles, wireframes, accessibility, typography, color system, navigation, responsive layouts.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Design principles, wireframes, accessibility, typography, color system, navigation, responsive layouts.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Design principles, wireframes, accessibility, typography, color system, navigation, responsive layouts.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

8. Database Design

Section 1

Entities: Users, Listings, Categories, Services, Jobs, Events, Messages, Favorites, Reviews, Notifications.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Entities: Users, Listings, Categories, Services, Jobs, Events, Messages, Favorites, Reviews, Notifications.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Entities: Users, Listings, Categories, Services, Jobs, Events, Messages, Favorites, Reviews, Notifications.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Entities: Users, Listings, Categories, Services, Jobs, Events, Messages, Favorites, Reviews, Notifications.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Entities: Users, Listings, Categories, Services, Jobs, Events, Messages, Favorites, Reviews, Notifications.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

9. API Design

Section 1

Authentication endpoints, CRUD operations, search APIs, messaging APIs, event APIs, internship APIs.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Authentication endpoints, CRUD operations, search APIs, messaging APIs, event APIs, internship APIs.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Authentication endpoints, CRUD operations, search APIs, messaging APIs, event APIs, internship APIs.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Authentication endpoints, CRUD operations, search APIs, messaging APIs, event APIs, internship APIs.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Authentication endpoints, CRUD operations, search APIs, messaging APIs, event APIs, internship APIs.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

10. Testing

Section 1

Unit, integration, system, usability, acceptance, regression, performance, security testing.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Unit, integration, system, usability, acceptance, regression, performance, security testing.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Unit, integration, system, usability, acceptance, regression, performance, security testing.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Unit, integration, system, usability, acceptance, regression, performance, security testing.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Unit, integration, system, usability, acceptance, regression, performance, security testing.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

11. Deployment

Section 1

GitHub, Vercel, Render/Railway, environment variables, production checklist.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

GitHub, Vercel, Render/Railway, environment variables, production checklist.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

GitHub, Vercel, Render/Railway, environment variables, production checklist.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

GitHub, Vercel, Render/Railway, environment variables, production checklist.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

GitHub, Vercel, Render/Railway, environment variables, production checklist.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

12. Documentation

Section 1

SRS, UML diagrams, ERD, installation guide, user manual, API documentation.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

SRS, UML diagrams, ERD, installation guide, user manual, API documentation.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

SRS, UML diagrams, ERD, installation guide, user manual, API documentation.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

SRS, UML diagrams, ERD, installation guide, user manual, API documentation.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

SRS, UML diagrams, ERD, installation guide, user manual, API documentation.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

13. Branding

Section 1

Logo concept, color palette, typography, tone of voice, brand guidelines, tagline.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Logo concept, color palette, typography, tone of voice, brand guidelines, tagline.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Logo concept, color palette, typography, tone of voice, brand guidelines, tagline.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Logo concept, color palette, typography, tone of voice, brand guidelines, tagline.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Logo concept, color palette, typography, tone of voice, brand guidelines, tagline.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

14. Market Research

Section 1

Competitor analysis, market opportunities, target audience, user personas, SWOT analysis.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Competitor analysis, market opportunities, target audience, user personas, SWOT analysis.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Competitor analysis, market opportunities, target audience, user personas, SWOT analysis.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Competitor analysis, market opportunities, target audience, user personas, SWOT analysis.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Competitor analysis, market opportunities, target audience, user personas, SWOT analysis.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

15. Marketing Strategy

Section 1

Go-to-market plan, social media calendar, launch campaign, growth strategy, customer acquisition.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Go-to-market plan, social media calendar, launch campaign, growth strategy, customer acquisition.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Go-to-market plan, social media calendar, launch campaign, growth strategy, customer acquisition.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Go-to-market plan, social media calendar, launch campaign, growth strategy, customer acquisition.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Go-to-market plan, social media calendar, launch campaign, growth strategy, customer acquisition.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

16. Business Model

Section 1

Revenue streams, partnerships, premium listings, sponsorships, advertising, future monetization.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Revenue streams, partnerships, premium listings, sponsorships, advertising, future monetization.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Revenue streams, partnerships, premium listings, sponsorships, advertising, future monetization.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Revenue streams, partnerships, premium listings, sponsorships, advertising, future monetization.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Revenue streams, partnerships, premium listings, sponsorships, advertising, future monetization.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

17. Agile Management

Section 1

Sprint planning, backlog, stand-ups, retrospectives, issue tracking.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Sprint planning, backlog, stand-ups, retrospectives, issue tracking.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Sprint planning, backlog, stand-ups, retrospectives, issue tracking.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Sprint planning, backlog, stand-ups, retrospectives, issue tracking.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Sprint planning, backlog, stand-ups, retrospectives, issue tracking.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

18. Risk Management

Section 1

Technical risks, communication risks, schedule risks, mitigation plans.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Technical risks, communication risks, schedule risks, mitigation plans.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Technical risks, communication risks, schedule risks, mitigation plans.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Technical risks, communication risks, schedule risks, mitigation plans.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Technical risks, communication risks, schedule risks, mitigation plans.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

19. Presentation Plan

Section 1

Introduction, demo, architecture, marketing, business strategy, challenges, lessons, future work.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

Introduction, demo, architecture, marketing, business strategy, challenges, lessons, future work.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

Introduction, demo, architecture, marketing, business strategy, challenges, lessons, future work.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

Introduction, demo, architecture, marketing, business strategy, challenges, lessons, future work.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

Introduction, demo, architecture, marketing, business strategy, challenges, lessons, future work.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

20. Future Enhancements

Section 1

AI recommendations, mobile application, notifications, real-time chat, analytics, payment integration.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 2

AI recommendations, mobile application, notifications, real-time chat, analytics, payment integration.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 3

AI recommendations, mobile application, notifications, real-time chat, analytics, payment integration.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 4

AI recommendations, mobile application, notifications, real-time chat, analytics, payment integration.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Section 5

AI recommendations, mobile application, notifications, real-time chat, analytics, payment integration.

Detailed discussion: define objectives, implementation approach, deliverables, roles, risks, acceptance criteria, best practices, collaboration expectations, and examples applicable to CampusConnect. Expand this section with diagrams, screenshots, meeting notes, and evidence during your actual project to create a submission suitable for academic assessment.

Appendix 1

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 2

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 3

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 4

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 5

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 6

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 7

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 8

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 9

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 10

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 11

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 12

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 13

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 14

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 15

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 16

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 17

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 18

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 19

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 20

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 21

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 22

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 23

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 24

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 25

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 26

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 27

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 28

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 29

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.

Appendix 30

Recommended content for this appendix: meeting minutes, sprint backlog, Git commit history, task allocation, UML diagrams, ER diagrams, wireframes, API specifications, test cases, screenshots, marketing assets, user survey results, branding materials, presentation notes, installation steps, deployment logs, and contribution records.

Use this appendix to insert project-specific evidence. Replace placeholder text with your team's actual work products before final submission.
